

Appl. No. 09/871,240
Amdt. dated February 2, 2004
Reply to Office Action of December 2, 2003

AMENDMENTS TO THE CLAIMS

The listing of claims below replace all prior versions, and listings, of claims:

- 1 1. (Cancelled)
- 1 2. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 a component including a seal engageable with the element.
- 1 3. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 a component including an anchor actuatable by the element.
- 1 4. (Cancelled)
- 1 5. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task,
4 wherein the element includes a sand screen.
- 1 6. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 a shock absorber including the element.
- 1 7. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 a releasable connector mechanism including the element.

Appl. No. 09/871,240
Amdt. dated February 2, 2004
Reply to Office Action of December 2, 2003

1 8. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 an explosive component including the element.

1 9. (Original) The apparatus of claim 8, wherein the explosive component
2 includes a shaped charge.

1 10. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 a weak point connector including the element.

1 11. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 a heating device to heat the element to a temperature sufficient to cause
5 the element to exhibit superplastic behavior.

1 12. - 26 (Cancelled)

1 27. (Previously Presented) The apparatus of claim 2, wherein the element is
2 adapted to translate the seal into engagement with a downhole structure.

1 28. (Previously Presented) The apparatus of claim 27, comprising a packer.

1 29. (Previously Presented) The apparatus of claim 27, comprising a patch.

1 30. (Previously Presented) The apparatus of claim 27, further comprising a
2 heating device to heat the superplastic material to a temperature such that the element
3 exhibits superplastic behavior.

Appl. No. 09/871,240
Amdt. dated February 2, 2004
Reply to Office Action of December 2, 2003

1 31. (Previously Presented) The apparatus of claim 30, further comprising a
2 piston adapted to cause translation of the element.

1 32. (Previously Presented) The apparatus of claim 30, wherein the heating
2 device comprises a propellant.

1 33. (Previously Presented) The apparatus of claim 2, further comprising a
2 conduit, wherein the element comprises a plug to block fluid flow in a bore of the
3 conduit.

1 34. (Previously Presented) The apparatus of claim 33, further comprising a
2 port to communicate fluid pressure to deform the plug inwardly to enable movement of
3 the plug.

1 35. (Previously Presented) The apparatus of claim 3, wherein the component
2 comprises a packer including the anchor.

1 36. (Previously Presented) The apparatus of claim 35, wherein the packer
2 further comprises a seal,
3 wherein the element comprises one or more sleeves attached to the anchor
4 and the seal, the one or more sleeves adapted to translate the anchor and seal into
5 engagement with a downhole structure.

1 37. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task,
4 wherein the element is selected from the group consisting of a casing, a
5 liner, a tubing, and a pipe; and
6 a heating device to heat the element to a temperature such that the element
7 exhibits superplastic behavior.

Appl. No. 09/871,240

Amdt. dated February 2, 2004

Reply to Office Action of December 2, 2003

1 38. (Previously Presented) The apparatus of claim 5, further comprising a
2 heating device to heat the sand screen to a temperature such that the sand screen exhibits
3 superplastic behavior.

1 39. (Previously Presented) The apparatus of claim 11, wherein the heating
2 device comprises a propellant.

1 40. (Previously Presented) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task; and
4 a fishing tool for a downhole conduit structure, the fishing tool comprising
5 the element.

1 41. (Previously Presented) The apparatus of claim 40, wherein the element is
2 adapted to expand to engage an inner well of the conduit structure.

1 42. (Currently Amended) An apparatus for use in a wellbore, comprising:
2 an element formed of a superplastic material to perform a predetermined
3 downhole task;
4 a junction seal assembly comprising the element; and
5 a heating device to heat the element to a temperature such that the element
6 exhibits superplasticity.

1 43. (Previously Presented) The apparatus of claim 42, wherein the element
2 comprises one of a tubing and pipe to be inserted into a lateral wellbore.
